Category of competencies	Code and name of competence	Code and name of competence
Economic culture, including financial literacy	UK-10. Able to make informed economic decisions in various areas of life	IUK-10.1. Understands the basic principles of the functioning of macroeconomics and economic development, the goals and types of state participation in the economy IUK-10.2. Represents the main patterns of functioning of microeconomics and factors that ensure the rational use of resources and the achievement of effective performance IUK-10.3. Applies methods of economic and financial planning to achieve personal financial goals, uses adequate financial tools for personal budget management, optimizes own financial risks

**Abstract of the discipline program  
B1.2.19.1 "Project management"  
for the direction of training 38.03.02 "Management"  
educational program "Business Process Management"**

**Aim** mastering the discipline "Project Management" is:

- combining all previously acquired knowledge and skills into a single integrated management system, as well as the study and development by students of the theoretical foundations and practical skills of project management.

The main tasks of mastering the discipline "Project Management" include:

- training in the project approach to managing the organization;
- training in quick response to changing trends in the development of a market economy.

**The place of the discipline in the structure of the bachelor's program**

The discipline "Project Management" is one of the disciplines of the part formed by the participants in educational relations (B1.2) of the bachelor's degree program. The discipline "Project Management" is interconnected logically and content-methodically with the following disciplines and practices of the OP: Project activities; Introduction to project activities; Basic management; Economic theory.

**The list of planned learning outcomes in the discipline, correlated with the planned results of mastering the educational program.**

Competency Code	As a result of mastering the educational program, the student must have	List of planned learning outcomes by discipline
UK-2	Able to determine the range of tasks within the set goal and choose the best ways to solve them based on the current legal norms of available resources and restrictions	IUK 2.1. Fundamentals of project management, types of product and technological innovations IUK 2.2. Use project management principles, implement technological and product innovations, or implement organizational changes IUK 2.3. Methods of project management, innovation and organizational change

**Abstract of the discipline program**  
**B1.2.19.2 "Fundamentals of technological entrepreneurship"**  
**for the direction of training 38.03.02 "Management"**  
**educational program "Business Process Management"**

The main goals of mastering the discipline "Fundamentals of technological entrepreneurship" include: the acquisition of a set of theoretical knowledge, skills and practical skills necessary to solve the main problems that arise in the implementation of innovative projects, including in high-tech areas, as well as training in interaction to solve specific tasks with specialists from other fields of activity (from the field of financial management, specialists in the field of specific technological solutions, market analysts, etc.)

Based on the goals, in the process of studying the discipline, the following tasks are solved: study of the theoretical foundations of the impact of the state on innovation; acquisition of skills in the analysis of innovative processes based on the generalization of world experience and taking into account Russian reality; development of skills for making and implementing innovative managerial decisions.

**The place of the discipline in the structure of the bachelor's program**

The discipline "Fundamentals of technological entrepreneurship" refers to a part of the disciplines formed by the participants in educational relations, (B.1.2.19.2) of the direction of training bachelors 38.03.02 "Management". "Fundamentals of Technological Entrepreneurship" is interconnected logically and content-methodically with the following disciplines and practices of the OP: Introduction to project activities, Project management, Project activities, Practice for obtaining primary professional skills; Undergraduate practice.

Carries out a search, critically evaluates, generalizes, systematizes and ranks the information required to solve the problem. IUK-1.3. Considers and offers rational options for solving the task, using a systematic approach, critically assesses their advantages and
OPK - 2	Able to collect, process and analyze the data necessary to solve the assigned management tasks, using modern tools and intelligent information and analytical systems	IOPK-2.1. Knows the methods of collecting, processing and analyzing data necessary to solve the set management tasks, using modern tools and intelligent information and analytical systems. IOPK-2.2. Able to collect, process and statistically analyze the data necessary to solve the set management tasks, using modern tools and intelligent information and analytical systems. IOPK-2.3. He has the skills to collect, process and analyze the data necessary to solve the assigned management tasks, using modern tools and intelligent information and analytical systems.

**Abstract of the discipline program**  
**B1.2.ED.6.2 "System analysis in management"**  
**for the direction of training 38.03.02 "Management"**  
**educational program "Business Process Management"**

**Main target** of the discipline "System Analysis in Management" - consideration of the theoretical foundations and patterns of building and functioning of systems, including economic, methodological principles of their analysis and synthesis, application of the studied patterns to develop systemic approaches to decision-making.

The main tasks of mastering the discipline "System Analysis in Management" include:

- familiarization with the basic concepts and definitions of systems, the structure and general properties of systems, the factors of influence of the external environment, the possibilities and main approaches to using system analysis at the organization level;
- acquisition by students of theoretical knowledge on a systematic approach to the study of systems and practical skills in their modeling;
- acquisition by students of practical knowledge on the basic methods used in system analysis.

**The place of the discipline in the structure of the bachelor's program**

The discipline "System Analysis in Management" is one of the elective disciplines of the part (B1.2.ED) of the bachelor's degree program. The discipline "System Analysis in Management" is interconnected logically and content-methodically with the following disciplines and practices of the OP: Project activities; Fundamentals of management; Business process management; Economic theory.

**The list of planned learning outcomes in the discipline, correlated with the planned results of mastering the educational program.**

Competency Code	As a result of mastering the educational program, the student must have	List of planned learning outcomes by discipline
UK-1	Able to search, critically analyze and synthesize information, apply a systematic approach to solve tasks	IUK 1.1. the main provisions of the system approach, the terms of system analysis, the scope of methods of formalized representation of systems and methods of enhancing the experience and intuition of specialists, options for their mutual complement and intersection; IUK 1.2. apply the laws, models and methods of general systems theory in practice; carry out analysis and synthesis of system structures; IUK 1.3. the skills of reasonable choice and use of methods of system analysis of the organization in the decision-making process in the management of the operational (production) activities of organizations

**Abstract of the discipline program**  
**FD1 "Presentation design"**  
**for the direction of training 38.03.02 "Management"**  
**educational program "Business Process Management"**

The main goals of mastering the discipline "Presentation Design" should include the preparation of bachelors of comprehensive knowledge, practical and the formation of knowledge in the field of design history in the context of aesthetic, technological and socio-cultural functioning of design. Preparation of bachelors in the analysis and development of design elements for the design of visual communications in the context of socio-cultural design.

To the main tasks mastering the discipline "Presentation Design" should include:

- the formation of students' theoretical knowledge and practical skills in the field of methods, tools, approaches and principles of visual presentation of the results of educational scientific activity, based on the main provisions of the theory of design and implemented in the choice of tools and technologies, which include packages for preparing presentations and slide films ;
- the formation of students' basic skills in the preparation and implementation of public speaking, the ability to clearly formulate the theses of upcoming speeches, to defend their point of view logically and reasonably;
- the formation of students' motivation for self-education through the activation of independent cognitive activity.

**The place of the discipline in the structure of the OP of the bachelor's degree.**

The discipline "Presentation Design" is one of the elective disciplines of the bachelor's degree program.

The discipline "Presentation Design" is interconnected logically and methodically with the following disciplines and practices of the OP:

- Introduction to project activities;
- Basic management;
- Project management.

**The list of planned learning outcomes in the discipline, correlated with the planned results of mastering the educational program.**

As a result of mastering the discipline (module), students consolidate the competencies previously formed in the learning process.

**Abstract of the discipline program  
FD2 "Government Programs and Projects"  
for the direction of training 38.03.02 "Management"  
educational program "Business Process Management"**

**The list of planned learning outcomes in the discipline, correlated with the planned results of mastering the educational program.**

The main goal of the discipline "Government Programs and Projects" is to combine all previously acquired knowledge and skills into a single integrated management system, as well as to study and master the theoretical foundations and practical skills of project management by students. The project approach to management is modern and highly effective, used by many companies and organizations. Project management skills are necessary for managers in all sectors of economic and economic activity, they allow you to quickly and effectively respond to environmental changes, follow the development trends of the market situation.

**The place of discipline in the structure of the OP**

The discipline "Government programs and projects" is one of the elective disciplines (F) of the bachelor's degree program.

The discipline "Government programs and projects" is interconnected logically and content-methodologically with the following disciplines and practices of the OP:

- Management in industries and fields of activity;
- Fundamentals of technological entrepreneurship;
- International Management;
- Small businesses management.

**The list of planned learning outcomes for the discipline (module), correlated with the planned results of mastering the educational program.**

As a result of mastering the discipline (module), students consolidate the competencies previously formed in the learning process.
