WORKING PROGRAM OF THE DISCIPLINE

"Sales and Customer Relationship Management"

Field of study

38.03.02 Management

Educational program (profile)

"Business Process Management"

Qualification (degree)

Bachelor

Form of study

Part-time

Moscow 2022

1. Introduction to the discipline.

The discipline "Sales and customer relationship management" is aimed at students receiving higher education, aimed at obtaining the competence necessary to perform a new type of professional activity in the field of effective functioning of the organization's sales management system as a whole and for its structural divisions, acquiring the qualification "Manager".

Course Objectives:

- to form knowledge in the field of technologies for assessing the economic and social conditions for doing business, identifying new opportunities and creating new business models.
- the formation of skills for coordinating business activities in order to ensure the consistency of the implementation of the business plan by all participants.

Course objectives:

- to form students' ability to analyze the relationship between the functional strategies of companies in order to prepare balanced management decisions.
- to form the ability to analyze organizational and economic problems in order to stimulate production and increase sales of products, improve the quality and competitiveness of manufactured goods and services, economical and efficient use of material, financial and labor resources.

2. The place of the discipline in the structure of the master's program

The discipline "Sales and customer relationship management" is one of the disciplines of the part formed by the participants of educational relations (B.1.2.12) of the bachelor's degree program.

The discipline "Sales and Customer Relationship Management" is interconnected logically and methodically with the following disciplines of the EP:

- "Business Process Management";
- "Fundamentals of financial literacy";
- "Entrepreneurship";
- "Strategic Management".

2. The list of planned learning outcomes for the discipline (module), correlated with the planned results of mastering the professional training program.

As a result of mastering the discipline (module), students develop the following competencies and the following learning outcomes should be achieved as a stage in the formation of the relevant competencies:

As a result of mastering the educational program, the student must have	List of planned learning outcomes by discipline

3. Structure and content of the discipline.

Sections of the discipline "Sales and customer relationship management" are studied in the 3rd year in the 6th semester.

Full-time education.

Sixth semester:The total labor intensity of the discipline is 108 hours, of which 54 hours. classroom lessons (lectures - 18 hours, practical classes - 36 hours), 54 hours. independent work. Form of control - offset;

Part-time form of education.

Sixth semester:The total labor intensity of the discipline is 108 hours, of which 36 hours. classroom lessons (lectures - 18 hours, practical classes - 18 hours), 72 hours. independent work. Form of control - offset;

The structure and content of the discipline "Sales and customer relationship management" by terms and types of work are reflected in Appendix 1

The content of the sections of the discipline.

Topic 1. Sales management. Definition, classification, subjects and sales items.

The concept of sales management. Sales categories. Subjects and objects of sales management: contact audiences, types, audiences, ways of working with them; distribution channels, types of distribution channels, ways of working with them; consumer markets: segmentation, ways of dividing consumer markets. Selection of consumer groups according to the VALS system. Identification of consumer groups according to the perception of innovation. Identification of consumer groups by focusing on needs. Sales funnel. Types of sales funnel. The main stages of the sales funnel.

Topic 2. Questioning as a tool for collecting primary data.

Methods of consumer market research. Ways to connect with the audience. Questionnaire survey - as a typical method of researching the consumer market. Pros and cons of a survey. Poll objects. Types of questionnaires. The main methods of conducting a questionnaire survey. Ways to improve the efficiency of questionnaire survey. The questionnaire is the main survey tool. Application of the questionnaire to obtain information about the consumer market. Ways to increase the return of the questionnaire.

Topic 3. CRM systems for managing sales and customer relationships.

Description of CRM-system. The concept, purpose and tasks of CRM. Choice of CRM-system. Choice preconditions. The main factors influencing the choice of a particular CRM system. SAAS-sysTopics. Standalone systems Budget CRM. The functionality of a CRM system in a medium (large) organization. The main blocks of the CRM system: communication, schedule, financial control, task scheduling, generation of documents and reports, automation of business processes - block assignment, block functionality, block structure, block correspondence with other components of the system. Schematic diagram of a CRM system.

Topic 4. Information sources for collecting primary information about the consumer market.

Typology of information sources in consumer market research. Primary information. secondary information. The main sources of secondary data are: Periodicals - business magazines and newspapers. Specialized internet marketing resources. Search engine data. Yellow pages server data <http://yellowpages.rin.ru>. Internet database, created for commercial purposes by consulting, publishing firms. Reference books on the firms. Statistical Yearbooks. Annual reports on the activities of firms. Communications of commercial and industrial chambers, unions of entrepreneurs. Advantages and disadvantages of secondary data. Advantages and disadvantages of primary data. Statistical register of Rosstat as a source of information for consumer market research.

Topic 5. Methods of collecting primary data in the study of the buyers' market: observation, interview, survey, document analysis, content analysis, focus group.

The process of collecting primary data. Sample of the studied persons. Random and non-random sampling. Nested sampling. Confidence sample. Primary data collection method: survey - definition, forms, advantages, disadvantages. Primary data collection method: observation - definition, forms, advantages and disadvantages. Primary data collection method: panel - definition, forms, advantages and disadvantages. Primary data collection method: experiment - definition, forms, advantages and disadvantages.

Topic 6. Building a questionnaire based on open and closed questions.

The main types of questionnaires. Requirements for the construction of the questionnaire. Questionnaire preparation algorithm. The structure of the questionnaire: introduction, introductory questions, questions on the content of the topic, the final part (passport). There are two types of questions in the questionnaire: closed questions, open questions. The main types of closed questions: alternative questions, questions with multiple answers, questions with a scale of significance, questions with a Likert scale, questions with a rating scale, semantic differential. The main types of open questions: unstructured questions, selection of word associations, completion of the story, thematic text for perception.

Topic 7. Building a consumer market research program.

Requirements for conducting consumer market research. Types of consumer market research: descriptive research, exploratory research, panel research, profile research, causal research. Five stages of conducting consumer market research. Stage 1. Definition of the problem, goals, development of research hypotheses. Stage 2. Development of a research plan, which includes: determination of the research method; determining the type of information required and methods for collecting the necessary data; development of data collection forms; choice of research objects. Stage 3. Data collection. Stage 4. Data analysis. Conclusions and practical proposals, preparation and presentation of the report.

Topic 8. Pricing. The procedure for calculating prices and decisions on setting the final price for the product.

The price of the product and its functions. Categories and types of prices. Price policy. Choosing a pricing policy for the organization. The main stages of pricing. Stage 1. Choosing a pricing goal. Stage 2. Determination of demand. Stage 3. Cost analysis. Stage 4. Analysis of competitors' prices. Stage 5. Choice of pricing methods. Stage 6. Setting the final price. Basic methods for calculating the price of goods. "Average costs plus profit" (cost method, list price method). Method of price calculation based on break-even analysis and ensuring target profit. Calculation of the price based on the "perceived value" of the product. Calculation of the price of the product for various organizations.

5. Educational technologies

The methodology for teaching the discipline "Sales and Customer Relationship Management" and the implementation of a competency-based approach in the presentation and perception of the material provides for the use of the following active and interactive forms of distance learning in combination with extracurricular work in order to form and develop the professional skills of students:

- answering questions about the lectures;
- passing the final test.

6. Evaluation tools for current monitoring of progress, intermediate certification based on the results of mastering the discipline and educational and methodological support for students' independent work

Current control (carried out by the lecturer and teacher): the correctness of answers to questions on the topics covered; assessment of existing opinions and approaches to solving specific problems; essay preparation; intermediate testing in separate sections of the discipline.

When performing current control, it is possible to use test material. Samples of control questions and tasks for conducting current control are given in the appendix. When implementing the undergraduate program, the organization has the right to use e-learning and distance learning technologies. All materials are placed in the LMS of the Moscow Poly (<https://online.mospolytech.ru/>).

When teaching people with disabilities, e-learning and distance learning technologies should provide for the possibility of receiving and transmitting information in forms accessible to them.

6.1. Fund of assessment tools for conducting intermediate certification of students in the discipline (module).

6.1.1. List of competencies indicating the stages of their formation in the process of mastering the educational program

As a result of mastering the educational program, the student must have
PC-4: Able to prepare for implementation, monitor parameters and evaluate the success of changes in the organization.

In the process of mastering the educational program, these competencies, including their individual components, are formed in stages during the development of disciplines (modules), practices by students in accordance with the curriculum and calendar schedule of the educational process.

6.1.2. Description of indicators and criteria for assessing competencies formed on the basis of the results of mastering the discipline (module), description of assessment scales

An indicator of competency assessment at various stages of their formation is the achievement by students of the planned learning outcomes in the discipline (module).

Scales for evaluating the results of the final certification and their description:
Form of final certification: test.

The final attestation of students in the form of a test is carried out based on the results of performing all types of educational work provided for by the curriculum for a given discipline (module), while taking into account the results of current monitoring of progress during the semester. The assessment of the degree of achievement by students of the planned learning outcomes in the discipline (module) is carried out by the teacher conducting classes in the discipline (module) by the method of expert assessment. Based on the results of the intermediate certification for the discipline (module), the grade "passed" or "failed" is given.

Only students who have completed all types of educational work provided for by the work program in the discipline "Sales and customer relationship management" are allowed to the final certification

<i>Evaluation scale</i>	<i>Description</i>
<i>Passed</i>	<i>All types of educational work provided for by the curriculum were completed. The student demonstrates the correspondence of knowledge, skills and abilities given in the tables of indicators, operates with the acquired knowledge, skills, skills, applies them in situations of increased complexity. In this case, minor errors, inaccuracies, difficulties in analytical operations, transferring knowledge and skills to new, non-standard situations can be made.</i>
<i>Not credited</i>	<i>One or more types of educational work provided for by the curriculum have not been completed. The student demonstrates incomplete correspondence of knowledge, skills and abilities given in the tables of indicators, significant errors are made, the lack of knowledge, skills and abilities is manifested in a number of indicators, the student experiences significant difficulties in operating knowledge and skills when transferring them to new situations.</i>

eight.Logistics support of discipline.

Audiences for lectures and seminars of the general fund: study tables with benches, classroom board, portable multimedia complex (projector, projection screen, laptop). Teacher's workplace: table, chair.

9. Guidelines for independent work of students

Lecture - a systematic, consistent, monologue presentation by the teacher of educational material, as a rule, of a theoretical nature. When preparing a lecture, the teacher is guided by the working program of the discipline. In the course of lectures, it is recommended to keep a summary, which will later allow you to recall the studied educational material, to supplement the content during independent work with literature.

You should also pay attention to categories, formulations that reveal the content of certain phenomena and processes, scientific conclusions and practical recommendations, positive experience in oratory. It is advisable to leave fields in the working notes on which to make notes from the recommended literature, supplementing the material of the lecture heard, as well as emphasizing the particular importance of certain theoretical positions.

Lecture conclusions summarize the teacher's reflections on educational issues. The teacher provides a list of used and recommended sources for studying a particular topic. At the end of the lecture, students have the opportunity to ask questions to the teacher on the topic of the lecture. When lecturing on the discipline, electronic multimedia presentations can be used.

Guidelines for students when working at the seminar

Seminars are implemented in accordance with the working curriculum with consistent study of the topics of the discipline. In preparation for the seminars, the student is recommended to study the basic literature, get acquainted with additional literature, new publications in periodicals: magazines, newspapers, etc. In this case, the recommendations of the teacher and the requirements of the curriculum should be taken into account. It is also recommended to refine your lecture notes by making appropriate entries in it from the literature recommended by the teacher and provided by the curriculum. Abstracts should be prepared for presentations on all educational issues submitted to the seminar.

Since the student's activity in seminars is the subject of monitoring his progress in mastering the course, preparation for seminars requires a responsible attitude. In interactive classes, students should be active.

Guidelines for students on the organization of independent work

Independent work of students is aimed at independent study of a separate topic of the academic discipline. Independent work is mandatory for each student, its volume is determined by the curriculum. During independent work, the student interacts with the

recommended materials with the participation of the teacher in the form of consultations. The electronic library system (electronic library) of the university provides the possibility of individual access for each student from any point where there is access to the Internet.

If there are students from among persons with disabilities, they will be provided with printed and (or) electronic educational resources in forms adapted to their disabilities.

10. Methodological recommendations for the teacher (Guidelines for making presentations)

A presentation (from the English word - presentation) is a set of color slide pictures on a specific topic, which is stored in a special format file with the PP extension. The term "presentation" (sometimes called "slide film") is associated primarily with the information and advertising functions of pictures that are designed for a certain category of viewers (users).

Multimedia computer presentation is:

- dynamic synthesis of text, image, sound;
- interactive contact of the speaker with the demonstration material;
- mobility and compactness of information carriers and equipment;
- ability to update, supplement and adapt information;

Rules for the design of computer presentations

General Design Rules

Many designers argue that there are no laws and rules in design. There are tips, tricks, tips. Design, like any kind of creativity, art, like any way of some people to communicate with others, like language, like thought, will bypass any rules and laws.

However, there are certain recommendations that should be followed, at least for novice designers, until they feel the strength and confidence to create their own rules and recommendations.

Font design rules:

- Serif fonts are easier to read than sans-serif fonts;
- Capital letters are not recommended for body text.
- Font contrast can be created through: font size, font weight, style, shape, direction, and color.
- Rules for choosing colors.
- The color scheme should consist of no more than two or three colors.
- There are incompatible color combinations.
- Black color has a negative (gloomy) connotation.
- White text on a black background is hard to read (inversion is hard to read).

Presentation design guidelines

In order for the presentation to be well perceived by the audience and not cause negative emotions (subconscious or completely conscious), it is necessary to follow the rules for its design.

The presentation involves a combination of information of various types: text, graphics, musical and sound effects, animation and video clips. Therefore, it is

necessary to take into account the specifics of combining fragments of information of various types. In addition, the design and demonstration of each of the listed types of information is also subject to certain rules. So, for example, for textual information, the choice of font is important, for graphic information - brightness and color saturation, for their best joint perception, optimal relative position on the slide is necessary.

Consider recommendations for the design and presentation of various types of materials on the screen.

Formatting text information:

- font size: 24–54 pt (headline), 18–36 pt;
- font color and background color should contrast (the text should be well read), but not hurt the eyes;
- font type: smooth sans-serif for body text (Arial, Tahoma, Verdana),
- italics, underlining, bold, capital letters are recommended to be used only for semantic highlighting of a text fragment.

Formatting graphic information:

- drawings, photographs, diagrams are designed to supplement textual information or convey it in a more visual form;
- it is desirable to avoid drawings in the presentation that do not carry a semantic load if they are not part of the style design;
- the color of graphic images should not contrast sharply with the overall style of the slide;
- illustrations are recommended to be accompanied by explanatory text;
- if a graphic image is used as a background, then the text on this background should be well readable.

The content and location of information blocks on the slide:

- there should not be too many information blocks (3-6);
- the recommended size of one information block is no more than 1/2 of the slide size;
- it is desirable to have on the page blocks with different types of information (text, graphs, diagrams, tables, figures) that complement each other;
- keywords in the information block must be highlighted;
- information blocks should be placed horizontally, blocks related in meaning - from left to right;
- the most important information should be placed in the center of the slide;
- the logic of presenting information on slides and in the presentation should correspond to the logic of its presentation.

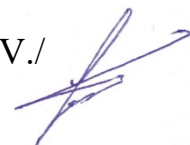

In addition to the correct arrangement of text blocks, one must not forget about their content - the text. In no case should it contain spelling errors. You should also take into account the general rules for formatting the text.

After creating a presentation and its design, you need to rehearse its presentation and your performance, check how the presentation will look like as a whole (on a computer screen or projection screen), how quickly and adequately it is perceived from different audience locations, under different lighting conditions, noise accompaniment, in an environment as close as possible to the real conditions of the performance.
