1. Goals, objectives and planned learning outcomes in the discipline.

The discipline “Sales and Customer Relationship Management” is aimed at students receiving higher education, aimed at obtaining the competence necessary to perform a new type of professional activity in the field of effective functioning of the sales management system of the organization as a whole and for its structural divisions, acquiring the “Manager” qualification.

Course objectives:

- to generate knowledge in the field of technologies for assessing the economic and social conditions of entrepreneurial activity, identifying new opportunities and forming new business models.
- developing skills for coordinating business activities in order to ensure consistency in the implementation of the business plan by all participants.

Course objectives:

- to develop in students the ability to analyze the relationships between functional strategies of companies in order to prepare balanced management decisions.
- to develop the ability to analyze organizational and economic problems in order to stimulate production and increase sales volumes, improve the quality and competitiveness of manufactured goods and services, economical and efficient use of material, financial and labor resources.

A list of planned learning outcomes for the discipline (module), correlated with the planned results of mastering the professional training program.

As a result of mastering the discipline (module), students develop the following competencies and the following learning outcomes must be achieved as a stage in the formation of relevant competencies:

Code and name of competencies	Indicators of Competency Achievement
PK-3 -Able to identify and engage with stakeholders	<p>IPK-3.1. Knows stakeholder theory; theory of interpersonal and group communication in business interaction; conflict theory; visual modeling languages; risk management theory; systems theory; subject area and specifics of the organization’s activities in a volume sufficient to solve business analysis problems;</p> <p>methods of planning the organization's activities.</p> <p>IPK-3.2. Can use technology identifying interested parties; plan, organize and conduct meetings And discussions With interested</p>

	<p>parties; use effective communication techniques; identify, register, analyze and classify risks and develop a set of measures to minimize them; collect, classify, systematize and ensure storage and updating of business analysis information; formalize the results of business analysis in accordance with the selected approaches; identify connections and dependencies between elements of business analysis information; apply information technology to the extent necessary for business analysis purposes; analyze internal (external) factors and conditions affecting the organization's activities; analyze the degree of stakeholder participation; analyze the quality of business analysis information in terms of selected criteria; analyze the subject area; perform functional breakdown of work; model the scope and boundaries of work; present business analysis information in a variety of ways and formats for discussion with stakeholders; explain the need for business analysis work.</p> <p>IPK-3.3. Knows methods of analyzing context, organizational structure, business processes in order to identify stakeholders; collecting and recording information about stakeholders; organizing the storage of information about stakeholders and keeping it up to date; analysis and classification of stakeholders; developing strategies for stakeholder engagement and collaboration; developing stakeholder engagement plans; preparing stakeholders for cooperation (explanation, training); stakeholder engagement and stakeholder monitoring; managing risks arising from interactions with stakeholders.</p>
--	--

2. Place of discipline in the structure of the educational program

The discipline "Sales and Customer Relationship Management" is one of the disciplines of the part formed by participants in educational relations (B.1.2.) of the undergraduate educational program.

The discipline "Sales and Customer Relationship Management" is logically, substantively and methodologically interconnected with the following EP disciplines:

- "Control business processes";
- "Basics financial literacy";
- "Entrepreneurship";
- "Strategicmanagement".

3. Structure and content of the discipline.

The total labor intensity of the discipline is 3 credit(s) units (108 hours).

3.1. Types of educational work and labor intensity

(according to forms of study)

3.1.1. Part-time and part-time education

No. p/p	Type of educational work	Number of hours	Semesters	
			6	-
1	Auditory lessons	36	36	-
	Including:			-
1.1	Lectures	18	18	-
1.2	Seminars/practical sessions	18	18	-
1.3	Laboratory exercises	-	-	-
2	Independent work	72	72	-
3	Interim certification	-	-	-
	Test/differential test/exam	test	test	-
	Total	108	108	

3.2. Thematic plan for studying the discipline

(according to forms of study)

3.2.1. Part-time and part-time education

No.	Sections/topics of the discipline	Labor intensity, hour					
		Total	Classroom work				Independently at the job
			Lecture	Seminars/practical classes	Laboratory exercises	Practical training	
1	Topic 1. Sales management. Definition, classification, subjects and objects of sales.	12	2	2	-	-	8
2	Topic 2. Questioning as a tool for collecting primary data.	14	2	2	-	-	10
3	Subject 3. CRM systems sales and relationship management with clients.	14	2	2	-	-	8
4	Topic 4. Information sources for collecting primary information about the consumer market.	12	2	2	-	-	10

5	Topic 5. Methods for collecting primary data in buyer market research: observation, interview, survey, analysis document, content analysis, focus group.	12	2	2	-	-	8
6	Topic 6. Construction of a questionnaire based on open and closed questions.	14	2	2	-	-	10
7	Topic 7. Construction of a research program market consumers.	18	4	4	-	-	8
8	Topic 8. Pricing. The procedure for calculating prices and decisions on establishing the final product prices.	12	2	2	-	-	10
	Total	108	18	18			72

3.3. Contents of the discipline

Topic 1. Sales management. Definition, classification, subjects and objects of sales.

The concept of "sales management". Sales categories. Subjects and objects of sales management: contact audiences, types, audiences, ways of working with them; sales channels, types of sales channels, ways of working with them; consumer markets: segmentation, ways of dividing consumer markets. Identification of consumer groups using the VALS system. Identification of consumer groups according to the perception of innovation. Identification of consumer groups based on needs orientation. Sales funnel. Types of sales funnel. The main stages of the sales funnel.

Topic 2. Questioning as a tool for collecting primary data.

Methods of consumer market research. Ways to connect with the audience. Questionnaire surveys are a typical method of consumer market research. Advantages and disadvantages survey. Survey objects. Types of questionnaires. The main methods of conducting a questionnaire survey. Ways to increase the effectiveness of questionnaire survey. The questionnaire is the main survey tool. Using a questionnaire to obtain information about the consumer market. Ways to increase the return rate of a questionnaire.

Topic 3. CRM systems for managing sales and customer relationships.

Description of the CRM system. Concept, purpose and tasks of CRM. Choosing a CRM system. Prerequisites for choice. The main factors influencing the choice of a specific CRM system. SAAS systems. Standalone systems Budget CRM. Functionality of a CRM system in a medium (large) organization. The main blocks of a CRM system: communication, calendar plan, financial control, task planning, generation of documents and reports, automation of business processes - purpose of the block, functionality of the block, structure of the block, correspondence of the block with other components of the system. Schematic diagram of a CRM system.

Topic 4. Information sources for collecting primary information about the consumer market.

Typology of information sources in consumer market research. Primary information. Secondary information. Main sources of secondary data: Periodicals - business-oriented magazines and newspapers. Specialized Internet resources for marketing. Search engine data. Yellow Pages server data <http://yellowpages.rin.ru>. Internet databases created for commercial purposes by consulting and publishing firms. Directories of companies. Statistical yearbooks. Annual reports on the activities of companies. Messages from chambers of commerce and industry, unions of entrepreneurs. Advantages and disadvantages of secondary data. Advantages and disadvantages of primary data. Rosstat statistical register as a source of information for consumer market research.

Topic 5. Methods of collecting primary data in buyer market research: observation, interview, survey, document analysis, content analysis, focus group. Primary data collection process. Sample of study persons. Random and non-random sampling. Cluster sampling. Confidence sample. Primary data collection method: survey – definition, forms, advantages, disadvantages. Method of collecting primary data: observation - definition, forms, advantages, disadvantages. Primary data collection method: panel – definition, forms, advantages and disadvantages. Method of collecting primary data: experiment - definition, forms, advantages, disadvantages.

Topic 6. Construction of a questionnaire based on open and closed questions. Main types of questionnaires. Requirements for constructing a questionnaire. Algorithm for preparing a questionnaire. Structure profiles: introduction, introductory questions, questions. By content of the topic, final part (passport). There are two types of questions in the questionnaire: closed questions, open questions. The main types of closed questions: alternative questions, questions with answer options, questions with a significance scale, questions with a Likert scale, questions with a rating scale, semantic differential. The main types of open questions: unstructured questions, selection of word associations, story completion, thematic text for perception.

Topic 7. Building a consumer market research program.

Requirements for conducting consumer market research. Types of consumer market research: descriptive research, exploratory research, panel research, profile research, cause-and-effect research. Five stages of conducting consumer market research. Stage 1. Definition of the problem, goals, development of research hypotheses. Stage 2. Development of a research plan, which includes: determining the research method; determining the type of information required and methods for collecting the necessary data; development of forms for data collection; selection of research objects. Stage 3. Data collection. Stage 4. Data analysis. Conclusions and practical suggestions, preparation and presentation of the report.

Topic 8. Pricing. The procedure for calculating prices and decisions on setting the final price for a product.

The price of the product and its functions. Categories and types of prices. Price policy. Choosing a pricing policy for the organization. Main stages of pricing. Stage 1. Selecting a pricing goal. Stage 2. Determining demand. Stage 3. Cost analysis. Stage 4. Analysis of competitors' prices. Stage 5. Selecting pricing methods. Stage 6. Setting the final price. Basic methods for calculating the price of a product. "Average costs plus profit" (cost method, price list method). Method of calculating price based on break-even analysis and ensuring target profit. Calculation of price based on the "perceived value" of the product. Calculation of product prices for various organizations.

3.4. Topics of seminars/practical and laboratory classes

3.4.1. Seminars / Practical classes.

<i>Subject 1. Control sales. Definition, classification, subjects and objects of sales.</i>	Questions for lecture 2	Test tasks 1-5
<i>Subject 2. Questionnaire How tool collection primary data.</i>	Questions for lecture 3	Test tasks 6-9
<i>Subject 3. CRM systems management sales and relationships with clients.</i>	Questions for lecture 4	Test tasks 14-20
<i>Topic 4. Information sources for collecting primary information about the consumer market.</i>	Practical lesson 1	Test tasks 10-13
<i>Topic 5. Methods for collecting primary data in buyer market research: observation, interview, survey, document analysis, content analysis, focus group.</i>	Practical lesson 2	Test tasks 21-30
<i>Topic 6. Construction of a questionnaire based on open and closed questions.</i>	Practical Lesson 3	Test tasks 6-9
<i>Topic 7. Construction of a consumer market research program.</i>	Practical Lesson 4	Test tasks 12-19
<i>Topic 8. Pricing. The procedure for calculating prices and decisions on setting the final price for a product.</i>	Practical lesson 5	Test tasks 22-30

5. Material and technical support of discipline.

Auditoriums for lectures and seminars of the general fund: educational tables with

benches, a blackboard, a portable multimedia complex (projector, projection screen, laptop).
Teacher's workplace: table, chair.

6. Guidelines

6.1. Methodological recommendations for teachers on organizing training.

Current control (carried out by the lecturer and teacher): correctness of answers to questions on the topics covered; assessment of existing opinions and approaches to solving specific problems; essay preparation; intermediate testing in individual sections of the discipline.

When performing routine monitoring, it is possible to use test material. Samples of control questions and tasks for conducting ongoing monitoring are given in the appendix. When implementing a bachelor's degree program, an organization has the right to use e-learning and distance learning educational technologies. All materials are posted in the Moscow Polytechnic Library.

When training people with disabilities, e-learning and distance educational technologies must provide for the possibility of receiving and transmitting information in forms accessible to them.

6.2. Guidelines for students on mastering the discipline.

A lecture is a systematic, consistent, monologue presentation by a teacher of educational material, usually of a theoretical nature. When preparing a lecture, the teacher is guided by the work program of the discipline. During lectures, it is recommended to take notes, which will allow you to later recall the studied educational material and supplement the content when working independently with literature.

You should also pay attention to categories, formulations that reveal the content of certain phenomena and processes, scientific conclusions and practical recommendations, positive experience in oratory. It is advisable to leave margins in your working notes in which to make notes from the recommended literature, supplementing the material of the lecture you listened to, as well as emphasizing the special importance of certain theoretical positions.

Conclusions from the lecture summarize the teacher's thoughts on educational issues. The teacher provides a list of used and recommended sources for studying a specific topic. At the end of the lecture, students have the opportunity to ask questions to the teacher about the topic of the lecture. When delivering lectures on the discipline, electronic multimedia presentations can be used.

Methodological instructions for students when working at the seminar.

Seminars are implemented in accordance with the working curriculum with sequential study of the topics of the discipline. In preparation for the seminars, the student is recommended to study the basic literature, familiarize himself with additional literature, new publications in periodicals: magazines, newspapers, etc. In this case, you should take into account the recommendations of the teacher and the requirements of the curriculum. It is also recommended to finalize your lecture notes by making appropriate notes from the literature recommended by the teacher and provided for by the curriculum. Abstracts should be prepared for presentations on all educational issues brought up for the seminar.

Since the student's activity in seminar classes is the subject of monitoring his progress in mastering the course, preparation for seminar classes requires a responsible attitude. During interactive classes, students must be active.

Guidelines for students on organizing independent work.

Independent work of students is aimed at independent study of a separate topic of the academic discipline. Independent work is mandatory for each student, its volume is determined by the curriculum. When working independently, the student interacts with recommended materials with the participation of the teacher in the form of consultations. The electronic library system (electronic library) of the university provides the possibility of individual access for each student from any point where there is access to the Internet.

If there are students with disabilities, they will be provided with printed and (or) electronic educational resources in forms adapted to their health limitations.

Guidelines for making presentations.

A presentation (from the English word - presentation) is a set of color pictures-slides on a specific topic, which is stored in a special format file with the PP extension. The term "presentation" (sometimes called "slide film") is associated primarily with the information and advertising functions of pictures, which are designed for a certain category of viewers (users).

Multimedia computer presentation is:

- dynamic synthesis of text, image, sound;
- the most modern software interface technologies;
- interactive contact between the speaker and the demonstration material;
- mobility and compactness of information media and equipment;
- ability to update, supplement and adapt information;
- low cost.

Rules for designing computer presentations General design rules

Many designers claim that there are no laws or rules in design. There are tips, tricks, tricks. Design, like any kind of creativity, art, like any way of some people communicating with others, like a language, like a thought, will bypass any rules and laws.

However, there are certain guidelines that should be followed, at least for novice designers, until they feel the strength and confidence to create their own rules and guidelines.

Font design rules:

- Serif fonts are easier to read than sans serif fonts;
- It is not recommended to use capital letters for body text.
- Font contrast can be created through: font size, font weight, style, shape, direction and color.
- Rules for choosing colors.
- The color scheme should consist of no more than two or three colors.
- There are incompatible color combinations.
- Black color has a negative (gloomy) connotation.
- White text on a black background is hard to read (inversion is hard to read).

Presentation Design Guidelines

In order for the presentation to be well received by the audience and not cause negative emotions (subconscious or fully conscious), it is necessary to follow the rules of its design.

A presentation involves a combination of information of various types: text, graphics, music and sound effects, animation and video clips. Therefore, it is necessary to take into account the specifics of combining pieces of information of different types. In addition, the design and display of each of the listed types of information is also subject to certain rules. So, for example, the choice of font is important for textual information, brightness and color saturation are important for graphic information, and optimal relative position on the slide is necessary for the best possible perception of them together.

Let's consider recommendations for the design and presentation of various types of materials on the screen.

Formatting text information:

- font size: 24–54 points (heading), 18–36 points (plain text);
- the font color and the background color should contrast (the text should be easy to read), but not hurt the eyes;
- font type: for the main text a smooth sans-serif font (Arial, Tahoma, Verdana), for the title you can use a decorative font if it is easy to read;
- Italics, underlining, bold font, and capital letters are recommended to be used only for semantic highlighting of a text fragment.
 - Design of graphic information:
 - drawings, photographs, diagrams are designed to supplement textual information or convey it in a more visual form;
 - It is advisable to avoid drawings in the presentation that do not carry a semantic load, if they are not part of the style;
 - the color of the graphic images should not sharply contrast with the overall style of the slide;
 - illustrations are recommended to be accompanied by explanatory text;
 - if a graphic image is used as a background, then the text on this background should be clearly readable.
 - Contents and arrangement of information blocks on the slide:
 - there should not be too many information blocks (3-6);
 - the recommended size of one information block is no more than 1/2 the size of the slide;
 - It is desirable to have blocks with different types of information on the page (text, graphs, diagrams, tables, pictures) that complement each other;
 - Key words in the information block must be highlighted;
 - It is better to place information blocks horizontally, blocks related in meaning - from left to right;
 - the most important information should be placed in the center of the slide;
 - the logic of presenting information on slides and in a presentation must correspond to the logic of its presentation.

In addition to the correct arrangement of text blocks, we must not forget about their content - the text. Under no circumstances should it contain spelling errors. You should also take into account the general rules of text formatting.

After creating a presentation and its design, you need to rehearse its presentation and your speech, check how the presentation as a whole will look (on a computer screen or projection screen), how quickly and adequately it is perceived from different places in the

audience, under different lighting, noise, in an environment as close as possible to real performance conditions.

7. Appraisal Fund

7.1. Methods for monitoring and assessing learning outcomes

In the process of mastering this discipline, the student develops and demonstrates the following competencies:

COMPETENCIES		List of components	Technology for developing competencies	Form of assessment tool**	Degrees of mastery levels competencies
INDEX	FORMULAS -ROVKA				
PK-3	Able to identify interested other parties and interact with them	<p>IPK-3.1. Knows stakeholder theory; theory of interpersonal and group communication in business interaction; conflict theory; visual modeling languages; risk management theory; systems theory; subject area and specifics of the organization's activities to the extent sufficient to solve business analysis problems; methods of planning the organization's activities.</p> <p>IPK-3.2. Knows how to use stakeholder identification techniques; plan, organize and conduct meetings and discussions with stakeholders; use effective communication techniques; identify, register, analyze and classify risks and develop a set of measures to minimize them; collect, classify, systematize and ensure storage and updating of business analysis information; formalize the results of business analysis in accordance with the selected approaches; identify connections and dependencies between elements of business analysis information; apply information technology to the extent necessary for business analysis purposes; analyze internal (external) factors and conditions affecting the organization's activities; analyze the degree of stakeholder participation; analyze the quality of business analysis information in terms of selected criteria; analyze the subject area; fulfill functional work breakdown; model the scope and boundaries of work; provide information business analysis in a variety of ways and formats for discussion with stakeholders; explain necessity carrying</p>	lecture, seminars	DS, T, Z	<p>A basic level of: sales management technologies; Ways sales; sales channel and sales audience.</p> <p>Elevated 1st level: has the skills to develop a business sales plan for an organization</p>

		out business analysis work.			
		IPK-3.3. Knows methods of context analysis, organizational structures, business processes in order to identify stakeholders; collection and registration of information about interested sides; organizing the storage of information about stakeholders and keeping it up to date; analysis and classification of stakeholders parties; developing strategies for stakeholder engagement and collaboration; developing plans interaction with interested parties; preparing stakeholders for cooperation (explanation, training); stakeholder engagement and monitoring interested parties; managing risks arising from interactions with stakeholders.			

7.2. Scale and criteria for assessing learning outcomes

In the process of mastering the educational program, competencies, including their individual components, are formed step by step as students master disciplines (modules) and practices in accordance with the curriculum and calendar schedule of the educational process.

An indicator for assessing competencies at various stages of their formation is the achievement by students of the planned learning outcomes in the discipline (module).

PK-3 - Able to identify stakeholders and interact with them

In this case, minor errors, inaccuracies, and difficulties during analytical operations and the transfer of knowledge and skills to new, non-standard situations may be made.</i>
<i>Not accepted</i>	<i>One or more types of educational work provided for by the curriculum have not been completed. The student demonstrates incomplete compliance of knowledge, abilities, skills with those given in the tables of indicators, significant mistakes are made, a lack of knowledge, abilities, skills is manifested in a number of indicators, the student experiences significant difficulties in operating knowledge and skills when transferring them to new situations.</i>

7.3. Discipline assessment tools "Sales and customer relationship management"

OS No.	Name of the assessment facilities	Brief description of the evaluation tool	Submission of evaluative funds in FOS

1	Report, message (DS)	Student's independent work product representing yourself public speech to present the results obtained in solving a specific educational, practical, educational, research or scientific topic	Topics of reports, messages
2	Test (W)	Final form of knowledge assessment. In higher education institutions they are held during examination sessions.	Tests questions for testing
4	Test (T)	System standardized tasks, allowing automate procedure for measuring the level of knowledge and skills of the student.	Test task fund

7.3.1. Current control

Topics of reports on the discipline

“Sales and customer relationship management” (formation of competence PC-3)

Topic 1. Basic tools and methods of market research and analysis. Topic 2. Market research and analysis program and methods of its formation.

Topic 3. Information sources for collecting primary information about the consumer market.

Topic 4. Methods of collecting primary data in buyer market research: observation, interview, survey, document analysis, content analysis, focus group. Topic 5. Constructing a questionnaire based on open and closed questions.

Topic 6. Methods of consumer market segmentation: socio-economic, psychographic, behavioral segmentation.

Topic 7. Calculation of market capacity indicators: TAM, SAM, SOM.

Topic 8. Competitive market analysis: construction of a competitiveness polygon.

Topic 9. Competitive market analysis: analysis of Porter's 5 forces.

Topic 10. Analysis of market conditions: conducting a PEST analysis of the territorial market.

Topic 11. Multi-criteria assessment of the quality and competitiveness of an organization's product.

Subject 12. Positioning product organizations on matrix Lambena "Cost-profit).

Topic 13. Analysis of the organization's market potential: BCG matrix, matrices McKinsey-GE.

Topic 14. Product design based on market analysis.

Topic 15. Design and programming of the launch of a finished product on the market in the future (creation of a product business plan).

Report evaluation criteria

No	Criterion	Grade			
		ex.	chorus	satisfaction	unsatisfactory
1	Structure of the report	The report contains semantic parts, balanced in volume	The report contains three semantic parts, unbalanced in volume	One of the semantic parts is missing from the report	The report does not show the presence of semantic parts
2	Contents of the report	Content reflects the essence of the problem under consideration and the main results obtained	The content does not fully reflect the essence of the problem under consideration or the main findings results	The content does not fully reflect the essence of the problem under consideration and the main findings results	The content does not reflect the essence of the problem under consideration or the main results obtained
3	Mastery of the material	The student is fully aware of the material presented, navigates the problem, freely answers the questions	The student knows the material presented, is oriented in the problem, finds it difficult to answer some questions	Student is not enough fluent in the material presented, poorly oriented in the problem	The student does not know the material being presented and has poor understanding of the problem
4	Compliance topic	The material presented is fully consistent stated topic	The presented material contains elements that don't match the theme	The presented material contains a large number of elements that do not have attitude to the topic	Set outThe material is slightly relevant to the topic

7.3.2. Interim certification

Questions to prepare for the test in the discipline "Sales and Customer Relationship Management" (formation of competence PC-3)

1. Definition of the concept "Sales Management".
2. The main functionality of a sales manager in an organization.
3. Main sales categories in the organization.

4. You work in a retail company that supplies food products to supermarkets in Moscow. You need to estimate the number of companies engaged in similar business in Moscow and the range of their supplies.
To do this, it is better to use sources: A)
statistical yearbooks of Rosstat; B)

- directories of companies;
 B) online databases;
 D) specialized press devoted to the problems of the industry.
5. Method of obtaining information directly from respondents: A)
 observation;
 B) document analysis;
Question;
 D) experiment;
6. The source of primary information during the survey is: A)
 the patient;
 B) recipient; B)
 opponent; D)
 respondent.
7. Type questions questionnaires, intended For checks logicalcorrespondence and sincerity of respondents' answers:
 A) control; B)
 introductory;
 B) basic;
D) filters.
8. Questions, given With purpose selection competent respondents. are called:
 A) contact; B)
 control; B) filters;
 D) preliminary.
9. A survey question containing all possible answers to it is called:
A) closed;
 B) open;
 B) semi-closed; D)
 interval.
10. Your company produces industrial goods. Spare parts for car assembly plants. Name your target group of consumers:
 A) Families or households; B)
 Intermediaries;
B) Suppliers (representatives of companies);
