1. Goals, objectives and planned learning outcomes in the discipline.

The discipline “Corporate Social Responsibility” is aimed at students receiving higher education, aimed at obtaining the competence necessary to perform a new type of professional activity in the field of effective functioning of the sales management system of the organization as a whole and for its structural divisions, acquiring the “Manager” qualification.

Course objectives:

- to generate knowledge in the field of technologies for assessing the economic and social conditions of entrepreneurial activity, identifying new opportunities and forming new business models.

- developing skills for coordinating business activities in order to ensure consistency in the implementation of the business plan by all participants.

Course objectives:

- to develop in students the ability to analyze the relationships between functional strategies of companies in order to prepare balanced management decisions.

- to develop the ability to analyze organizational and economic problems in order to stimulate production and increase sales volumes, improve the quality and competitiveness of manufactured goods and services, economical and efficient use of material, financial and labor resources.

A list of planned learning outcomes for the discipline (module), correlated with the planned results of mastering the professional training program.

As a result of mastering the discipline (module), students develop the following competencies and the following learning outcomes must be achieved as a stage in the formation of relevant competencies:

Code and name of competencies	Indicators of Competency Achievement
PK-3 -Able to identify interested parties and interact with them	IPK-3.1. Knows stakeholder theory; theory of interpersonal and group communication in business interaction; conflict theory; visual modeling languages; risk management theory; systems theory; subject area and specifics of the organization’s activities in a volume sufficient to solve business analysis problems; methods of planning the organization's activities. IPK-3.2. Able to use detection techniques interested parties; plan, organize and conduct meetings and discussions with interested

	<p>parties; use effective communication techniques; identify, register, analyze and classify risks and develop a set of measures to minimize them; collect, classify, systematize and ensure storage and updating of business analysis information; formalize the results of business analysis in accordance with the selected approaches; identify connections and dependencies between elements of business analysis information; apply information technology to the extent necessary for business analysis purposes; analyze internal (external) factors and conditions affecting the organization's activities; analyze the degree of stakeholder participation; analyze the quality of business analysis information in terms of selected criteria; analyze the subject area; perform functional breakdown of work; model the scope and boundaries of work; present business analysis information in a variety of ways and formats for discussion with stakeholders; explain the need for business analysis work.</p> <p>IPK-3.3. Knows methods of analyzing context, organizational structure, business processes in order to identify stakeholders; collecting and recording information about stakeholders; organizing the storage of information about stakeholders and keeping it up to date; analysis and classification of stakeholders; developing strategies for stakeholder engagement and collaboration; developing stakeholder engagement plans; preparing stakeholders for cooperation (explanation, training); stakeholder engagement and stakeholder monitoring; managing risks arising from interactions with stakeholders.</p>
--	--

2. Place of discipline in the structure of the educational program

The discipline “Corporate Social Responsibility” is one of the disciplines of the part formed by participants in educational relations (B.1.2.) of the undergraduate educational program.

The discipline “Corporate Social Responsibility” is logically, substantively and methodologically interconnected with the following EP disciplines:

- Fundamentals of Management;
- Personnel Management;
- Distributed Community Management

3. Structure and content of the discipline.

The total labor intensity of the discipline is 3 credit(s) units (108 hours).

3.1. Types of educational work and labor intensity

(according to forms of study)

3.1.1. Part-time education

No. p/p	Type of educational work	Number of hours	Semesters	
			6	-
1	Auditory lessons	36	36	-

	Including:			-

8	Topic 8.. International and national competitions of non-financial reports. Profile ratings of social contribution of companies. Criteria for compiling ratings in world practice.	12	2	2	-	-	10
Total		108	18	18			72

3.3. Contents of the discipline

Topic 1 The relationship between state social policy and corporate social responsibility. Social policy and its tasks. Social policy at the corporate level.

Topic 2 History of the emergence and development of CSR. The main reasons for the intensive development of CSR. Various approaches to the interpretation and assessment of the concept of socially responsible business. The concept of “corporate egoism”. The concept of “corporate altruism”. The theory of enlightened or “reasonable egoism.” Theory of socially responsible behavior. Positive and negative aspects of CSR. The essence of the concept of “corporate social responsibility”. Model by A. Carroll.

Topic 3 Modern practice of corporate social responsibility. American, Western European, Scandinavian, British, Japanese models of corporate social responsibility. Features of the formation of CSR in the Russian business community. Modern CSR system in corporate management.

Topic 4 The essence of corporate governance and stakeholder theory. Management system for a large company. Powers and functions of the corporation's management bodies to integrate the principles and technologies of social responsibility. CSR as an important factor in strategic development.

Topic 5 Responsibility and sustainable development of the organization. Elements of CSR. CSR principles. Levels of CSR application. Risk management in large Russian companies. Ways to reduce non-financial risks.

Topic 6 Internal and external corporate social responsibility. Social policy regarding employees. Charity, sponsorship, organization and holding of cultural events. Implementation of long-term social programs at the municipal and federal levels.

Topic 7 Non-financial reporting of companies. Internationally accepted CSR standards. Russian CSR standards. International and national competitions of non-financial reports.

Topic 8 Profile ratings of companies' social contribution. Criteria for compiling ratings in world practice. Stock indices of social responsibility. Non-stock indices of social responsibility. Russian experience in preparing CSR ratings. Managing corporate responsibility and assessing its effectiveness.

3.4. Topics of seminars/practical and laboratory classes

3.4.1. Seminars / Practical classes.

Topic 1. Review of a non-financial report of a large company. Report structure, main sections	Practicallesson 1
Topic 2. Consideration of requirements for the implementation of an independent content part. work. Discussion of work requirements, selection of research target companies. Familiarization with a sample scientific report. Consideration of current trends in the field of CSR at the global and national level.	Practicallesson 8 Test tasks 1-5
Topic 3. Comparative analysis of CSR models. Acquaintance with general trends in the field of social responsibility of business, taking into account the specifics of CSR in the automotive industry using A. Carroll's pyramid.	Test tasks 6-9
Topic 4. Corporate governance system in Russian automobile manufacturing holdings. CSR as a factor in increasing the investment attractiveness of companies.	Test tasks 14-20
Topic 5. CSR in Russian automotive companies. Consideration of the results of the study "CU through the eyes of foreign specialists."	Test tasks 10-13
Topic 6. Consideration of external and internal CSR using the example of large Russian automotive companies. Completing a test task based on the material covered.	Test tasks 21-30
Topic 7. Public and professional audit (verification) of non-financial reporting. Review of the company's integrated report.	Test tasks 6-9
Topic 8. Russian CG and CSR ratings. Control test on the material covered	Test tasks 12-19
Practicallesson 1	
Practicallesson 2	Test tasks 22-30
Practicallesson 3	
Practicallesson 4	
Practicallesson 5	
Practicallesson 6	

4. Educational, methodological and information support

4.1. Main literature:

1) Corporate social responsibility: a textbook for universities / V. Ya. Gorfinkel [et al.]; edited by V. Ya. Gorfinkel, N. V. Rodionova. — 3rd ed., revised. and additional - Moscow: Yurayt Publishing House, 2024. - 490 p. - (Higher education). — ISBN 978-5-534-14561-8. — Text: electronic // Educational platform Urayt [website]. — URL:<https://urait.ru/bcode/536046>

2) Corporate social responsibility: textbook and workshop for universities / E. M. Korotkov [et.]; edited by E. M. Korotkov. — 2nd ed. - Moscow: Yurayt Publishing House, 2024. - 429 p. - (Higher education). — ISBN 978-5-534-07332-4. — Text: electronic // Educational platform Urayt [website]. — URL:<https://urait.ru/bcode/535859>

5. Material and technical support of discipline.

Auditoriums for lectures and seminars of the general fund: educational tables with benches, a blackboard, a portable multimedia complex (projector, projection screen, laptop). Teacher's workplace: table, chair.

6. Guidelines

6.1. Methodological recommendations for teachers on organizing training.

Current control (carried out by the lecturer and teacher): correctness of answers to questions on the topics covered; assessment of existing opinions and approaches to solving specific problems; essay preparation; intermediate testing in individual sections of the discipline.

When performing routine monitoring, it is possible to use test material. Samples of control questions and tasks for conducting ongoing monitoring are given in the appendix. When implementing a bachelor's degree program, an organization has the right to use e-learning and distance learning technologies. All materials are posted in the Moscow Polytechnic Library.

When training people with disabilities, e-learning and distance educational technologies must provide for the possibility of receiving and transmitting information

in forms accessible to them.

6.2. Guidelines for students on mastering the discipline.

A lecture is a systematic, consistent, monologue presentation by a teacher of educational material, usually of a theoretical nature. When preparing a lecture, the teacher is guided by the work program of the discipline. During lectures, it is recommended to take notes, which will allow you to later recall the studied educational material and supplement the content when working independently with literature.

You should also pay attention to categories, formulations that reveal the content of certain phenomena and processes, scientific conclusions and practical recommendations, positive experience in oratory. It is advisable to leave margins in your working notes in which to make notes from the recommended literature, supplementing the material of the lecture you listened to, as well as emphasizing the special importance of certain theoretical positions.

Conclusions from the lecture summarize the teacher's thoughts on educational issues. The teacher provides a list of used and recommended sources for studying a specific topic. At the end of the lecture, students have the opportunity to ask questions to the teacher about the topic of the lecture. When delivering lectures on the discipline, electronic multimedia presentations can be used.

Methodological instructions for students when working at the seminar.

Seminars are implemented in accordance with the working curriculum with sequential study of the topics of the discipline. In preparation for the seminars, the student is recommended to study the basic literature, familiarize himself with additional literature, new publications in periodicals: magazines, newspapers, etc. In this case, you should take into account the recommendations of the teacher and the requirements of the curriculum. It is also recommended to finalize your lecture notes by making appropriate notes from the literature recommended by the teacher and provided for by the curriculum. Abstracts should be prepared for presentations on all educational issues brought up for the seminar.

Since the student's activity in seminar classes is the subject of monitoring his progress in mastering the course, preparation for seminar classes requires a responsible attitude. During interactive classes, students must be active.

Guidelines for students on organizing independent work.

Independent work of students is aimed at independent study of a separate topic of the academic discipline. Independent work is mandatory for each student, its volume is determined by the curriculum. When working independently, the student interacts with the recommended materials with the participation of the teacher in the form of consultations. The electronic library system (electronic library) of the university provides the possibility of individual access for each student from any point where there is access to the Internet.

If there are students with disabilities, they will be provided with printed and (or) electronic educational resources in forms adapted to their health limitations.

Guidelines for making presentations.

A presentation (from the English word - presentation) is a set of color pictures-

slides on a specific topic, which is stored in a special format file with the PP extension. The term “presentation” (sometimes called “slide film”) is associated primarily with the information and advertising functions of pictures, which are designed for a certain category of viewers (users).

Multimedia computer presentation is:

- dynamic synthesis of text, image, sound;
- the most modern software interface technologies;
- interactive contact between the speaker and the demonstration material;
- mobility and compactness of information media and equipment;
- ability to update, supplement and adapt information;
- low cost.

Rules for designing computer presentations

General design rules

Many designers claim that there are no laws or rules in design. There are tips, tricks, tricks. Design, like any kind of creativity, art, like any way of some people communicating with others, like a language, like a thought, will bypass any rules and laws.

However, there are certain guidelines that should be followed, at least for novice designers, until they feel the strength and confidence to create their own rules and guidelines.

Font design rules:

- Serif fonts are easier to read than sans serif fonts;
- It is not recommended to use capital letters for body text.
- FontContrast can be created through: font size, font weight, style, shape,

direction and color.

- Rules for choosing colors.
- The color scheme should consist of no more than two or three colors.
- There are incompatible color combinations.
- Black color has a negative (gloomy) connotation.
- White text on a black background is hard to read (inversion is hard to read).

Presentation Design Guidelines

In order for the presentation to be well received by the audience and not cause negative emotions (subconscious or fully conscious), it is necessary to follow the rules of its design.

A presentation involves a combination of information of various types: text, graphics, music and sound effects, animation and video clips. Therefore, it is necessary to take into account the specifics of combining pieces of information of different types. In addition, the design and display of each of the listed types of information is also subject to certain rules. So, for example, the choice of font is important for textual information, brightness and color saturation are important for graphic information, and optimal relative position on the slide is necessary for the best possible perception of them together.

Let's consider recommendations for the design and presentation of various types of materials on the screen.

Formatting text information:

- font size: 24–54 points (heading), 18–36 points (plain text); the font color and the background color should contrast (the text should be easy to read), but not hurt the eyes;
- font type: for the main text a smooth sans-serif font (Arial, Tahoma, Verdana), for the title you can use a decorative font if it is easy to read;
- Italics, underlining, bold font, and capital letters are recommended to be used only for semantic highlighting of a text fragment.
- Design of graphic information:
 - drawings, photographs, diagrams called upon supplement text information or convey it in a more visual form;
 - It is advisable to avoid drawings in the presentation that do not carry a semantic load, if they are not part of the style;
 - the color of the graphic images should not sharply contrast with the overall style of the slide;
 - illustrations are recommended to be accompanied by explanatory text;
 - if a graphic image is used as a background, then the text on this background should be clearly readable.
- Contents and arrangement of information blocks on the slide:
 - there should not be too many information blocks (3-6);
 - the recommended size of one information block is no more than 1/2 the size of the slide;
 - It is desirable to have blocks with different types of information on the page (text, graphs, diagrams, tables, pictures) that complement each other;
 - Key words in the information block must be highlighted;
 - It is better to place information blocks horizontally, blocks related in meaning - from left to right;
 - the most important information should be placed in the center of the slide;
 - the logic of presenting information on slides and in a presentation must correspond to the logic of its presentation.

In addition to the correct arrangement of text blocks, we must not forget about their content - the text. Under no circumstances should it contain spelling errors. You should also take into account the general rules of text formatting.

After creating a presentation and its design, you need to rehearse its presentation and your speech, check how the presentation as a whole will look (on a computer screen or projection screen), how quickly and adequately it is perceived from different places in the audience, under different lighting, noise, in an environment as close as possible to real performance conditions.

7. Appraisal Fund

7.1. Methods for monitoring and assessing learning outcomes

In the process of mastering this discipline, the student forms and demonstrates the following: competencies:					
COMPETENCIES		List of components	Technology for developing competencies	Form of assessment tool**	Degrees of mastery levels competencies
INDE X	FORMULAS -ROVKA				
PK-3	Capable of identifying stakeholders and interact with them	IPK-3.1.Knows stakeholder theory; theory of interpersonal and group communication in business interaction; conflict theory; visual modeling languages; risk management theory; systems theory; subject area and specifics of the organization's activities to the extent sufficient to solve business analysis problems; methods of planning the organization's activities.	lecture, seminars	DS, T, Z	A basic level of: capable analyze and evaluate socially responsible business activities units, make up
		IPK-3.2.Knows how to use stakeholder identification techniques; plan, organize and conduct meetings and discussions with stakeholders; use effective communication techniques; identify, register, analyze and classify risks and develop a set of measures to minimize them; collect, classify, systematize and ensure storage and updating of business analysis information; formalize the results of business analysis in accordance with the selected approaches; identify connections and dependencies between elements of business analysis information; apply information technologies to the extent necessary for business analysis purposes; analyze internal (external) factors and conditions affecting the organization's activities; analyze the degree of stakeholder participation; analyze the quality of business analysis information in terms of selected criteria; analyze the subject area; fulfill	functional work breakdown; model the scope and boundaries of work; provide information		business analysis in a variety of ways and formats for discussion with stakeholders; explain

		<p>IPK-3.3.Knows methods of context analysis, organizational structures, business processes in order to identify stakeholders; collection and registration of information about interested sides; organizing the storage of information about stakeholders and keeping it up to date; analysis and classification of stakeholders parties; developing strategies for stakeholder engagement and collaboration; developing plans interactions With interested parties; to cooperate (explanation, training); stakeholder engagement and monitoring interested parties; managing risks arising from interactions with stakeholders.</p>

7.2. Scale and criteria for assessing learning outcomes

In the process of mastering the educational program, competencies, including their individual components, are formed step by step as students master disciplines (modules) and practices in accordance with the curriculum and calendar schedule of the educational process.

An indicator for assessing competencies at various stages of their formation is the achievement by students of the planned learning outcomes in the discipline (module).

PC-3 - Able to identify stakeholders and interact with them
